

Prestige Extinguishers

We are able to offer our most popular extinguisher models in stainless steel (6Litre Foam / 9Litre Water) or highly polish aluminium (2kg CO₂).

Features:

- High fire ratings.
- Passed the 35kv conductivity of discharge test.
- Quality brass valves.
- Squeeze grip design for enhanced discharge control.
- Comes supplied with wall bracket.
- Highly polished finish.
- Impact resistant pressure gauge (not CO₂ model).
- Safety relief valve.

Note: as these products are not coloured red then they cannot be awarded the British Standard Kitemark. This bears no reflection on their performance and they have been independently fire tested. These products are made alongside our standard range using the same components and to the same high standard – the only difference is the cylinder.
